The Procedure

What is the procedure & are you a candidate?

Rhinoplasty or 'Nose Job' refers to a nose reshaping procedure. For many men, Rhinoplasty can be used to improve appearance or to improve the functional problems of breathing.

The Surgery

How is the procedure performed?

- In the Rhinoplasty surgery the bony and cartilaginous structure of the nose is modified to address the aesthetic desires of patient.
- The surgical approaches for Rhinoplasty could be 'open' or 'closed'.
- The 'Open' Rhinoplasty approach means only a small part of the incision is visible at the base of the columella.
- In the 'closed' approach, the incisions are placed inside the nose and the entire procedure is performed through incisions inside the nostrils.

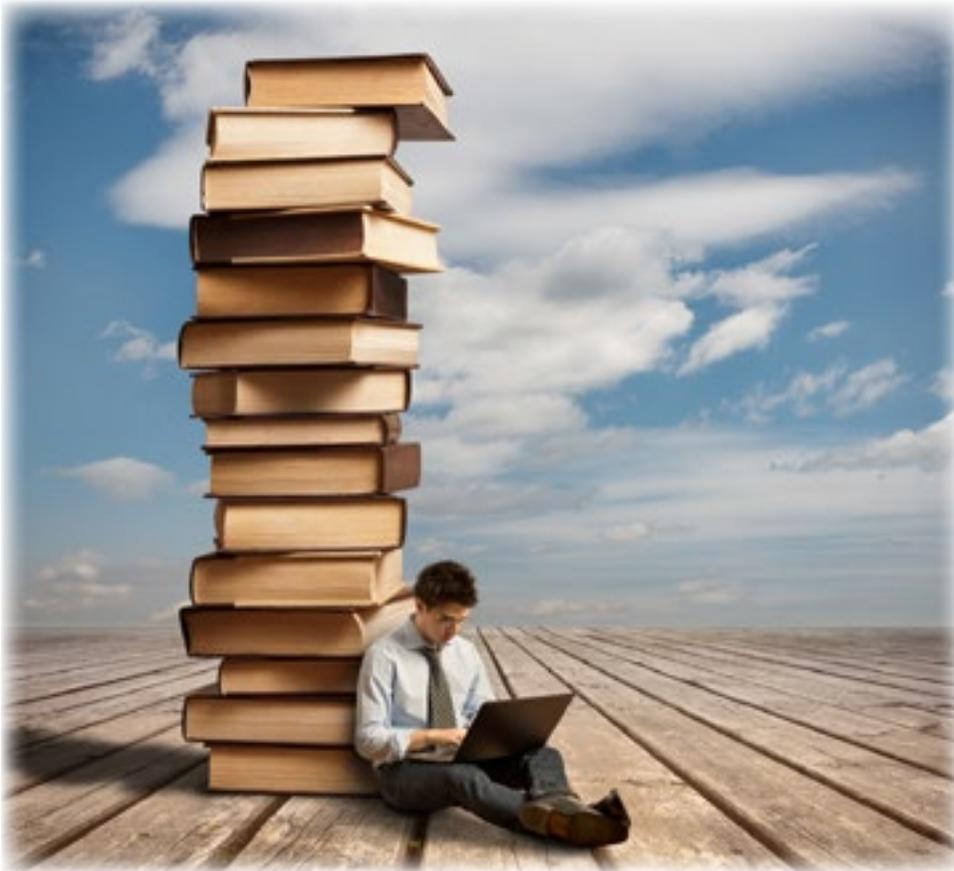

Dr Gahankari will discuss the pros and cons of both the approaches with you and suggest the best approach.

Prepare your **Mind & Body**

Surgery is a major event for anyone, and for a short time it will have a great impact on your life.

Thorough planning and preparation will ensure your experience is a positive one and your outcome meets your expectations.

Your **Mind**

Knowledge is power

- Have a thorough knowledge of the procedure. Ensure you have asked Dr. Gahankari any questions you have so you feel completely informed and comfortable.
- Understand that you will need time to recover and for a short time you will be incapacitated to some degree and unable to live your life the way you normally do. Allowing your body time to heal and recover will ensure your surgery is successful and you are back to your normal routine in as short a time as possible.
- Maintain a positive attitude. This surgery is something you are doing for your wellbeing and it is important to stay focused and positive.

Your **Body**

Prepare your body

- Quit smoking at least four weeks before your scheduled surgery. Smoking and nicotine make complications more likely and also slow the healing process.
- Ensure your body is as healthy as possible by eating well and exercising regularly prior to your surgery. Don't undertake any crash or fad dieting, or begin an unusually rigorous exercise program.
- Do not take any aspirin, ibuprofen or similar drugs for two weeks prior your procedure.
- Do not consume any alcohol for at least 48 hours prior your procedure.
- Remember that you should not eat or drink anything for 8 hours before the surgery.

Prepare your **Home**

Prior to your surgery take some time to prepare your home for your return.

- Ensure your bedroom has easy access for you post-surgery. If your bedroom is upstairs, consider moving to a downstairs room for the first week after your recovery.
- Ensure that your bedroom is set up for you to be comfortable. Have a table beside your bed with items you will need such as phones, phone chargers, books, diaries and remote controls. Make sure there are plenty of pillows so you can get comfortable.
- Check that your bathroom is suitably set up, preferably with a hand held shower so you can bathe without wetting any dressings. You may also want to invest in a shower chair or sturdy plastic chair to use in the shower.
- Have some healthy meals prepared and in the fridge or freezer for the first few days after surgery when you may not feel like cooking. Also have some snacks such as protein bars in the pantry.

Your **Home** (continued)

See you soon!

- Consider your pets. If you have cats or dogs that jump up on you or climb on you, it may be easier for you to have a friend mind them immediately after surgery.

Make sure you have:

- Ice packs
- Loose, comfortable clothing that is easy to put on and take off.
- Over the counter pain medications recommended by Dr. Gahankari.
- Prune juice. Pain medication may cause constipation and prune juice is a natural way to relieve this.

Your Support

Organise in advance for a more positive outcome

- Ensure the family and friends you have chosen to tell your surgery about know that you may need their help in the first days and weeks after your surgery. Allow them to assist you with some of your regular duties and commitments. Make sure they know what to expect on your return with regard to your capabilities.
- You'll need a friend or family member to drive you home after your surgery. If you live alone you will need someone to stay with you for a night or two. Organise this well in advance.
- Consider your schedule carefully prior to surgery and make alternative arrangements for things like driving kids to school or other commitments.
- Choose a trusted friend or family member who can help you care for any stitches and bandaging you may have. Dr. Gahankari will provide you with specific instructions on how to care for the bandages in the days following the surgery, and it is important that you follow them closely in order to prevent infection or excessive bleeding.
- Check that all the phone numbers you need are programmed into your phone or written in an address book beside your bed.

Procedure Day

On the day of your procedure ensure you:

- Have not had anything to eat or drink for 8 hours prior to surgery
- Arrive in plenty of time
- Have any paperwork you need with you
- Wear loose comfortable clothing
- Do not wear contact lenses
- Do not wear jewellery
- Do not wear make-up
- Do not wear nail polish
- Have organised your travel home after surgery.

After the procedure, you will be monitored to ensure that you have no residual effects from the anaesthesia and verify that there is no excess bleeding. You may have drainage tubes placed in the incision areas. Pain will be controlled with over the counter pain relievers unless Dr. Gahankari prescribes a stronger prescription. Generally the pain is minimal and easily controlled.

After Surgery

Body Lift is a major surgical procedure and requires significant time to recover.

- Nasal packs, if used are removed in 24 – 48 hours.
- If external sutures are used, they are removed between 5-7 days.
- Most of the swelling of the nose and that around the eyes subside in 2-3 weeks but subtle bruising and swelling subsides gradually and may take up to 6 months to one year.
- It is preferable not to blow your nose for at least a couple of weeks following the surgery. Contact sports are avoided up to at least 6 weeks following the procedure.

RELAX AND RECOVER

Remember, you have just had surgery so don't do anything stressful or undertake any strenuous physical activity.

Scars

What kind of scarring can you expect?

- There are no externally visible scars in closed technique. However, the open technique leaves a tiny scar under the columella, which usually fades in several weeks.
- Very occasionally tiny scars may be present between the eyes. These are from tiny incisions, sometimes used to facilitate precise breakage of the nose bones in re-shaping of nasal skeleton.

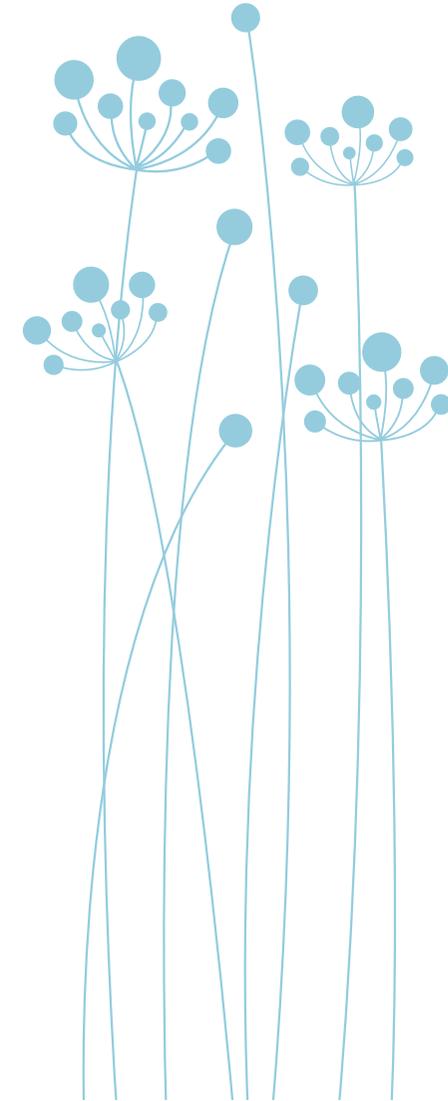

Risks

All surgery involves risk.

The risks in Rhinoplasty include:

- Wound infection,
- Bleeding or haematoma,
- Bruising,
- Asymmetry or un-evenness

Concerns

Surgery is a major event for anyone, and it is natural that you may have concerns.

We are here to help.

Call our clinic on **1300 007 300** at any time if you have any questions.

This number can also be used to contact Dr Gahankari's after hours service.

If you feel you need urgent medical attention, we advise that you visit the Accident and Emergency Department at your nearest hospital.

That's about it!

We hope that you've enjoyed reading our information guide, and that it's been helpful.

We love to hear from you! Please consider sharing your experience with us via [Google Plus Review](#) or [Social media](#).
